

ScienceDojo

Human-first STEM tutoring, structured from first assessment to confident independent learning

The opportunity. Many capable students understand more than their grades show. Families often receive isolated lessons, fragmented feedback, and little visibility into what should happen between sessions.

What ScienceDojo delivers

Verified tutoring. Families discover and book STEM tutors through a supported platform with onboarding, credential review, safeguarding processes, payments, and dispute handling.

Continuity between lessons. Class spaces connect lesson notes, homework, messaging, progress records, and live learning tools so support does not end when the call ends.

Guided practice. Practice Dojo offers open curriculum-aligned knowledge checks; premium Missions turn lesson context into personalised recall, reasoning, application, and error-correction tasks.

Parent clarity. Parents can see what was covered, what comes next, and how confidence and consistency are developing.

Who it serves

Students preparing for GCSE, IGCSE, A-Level and related STEM pathways. **Parents** seeking trusted tutors, reliable communication, and visible learning progress. **Tutors** who want qualified leads and an operating system for consistent teaching support.

Business model

Core revenue. A platform commission on completed tutoring bookings; the current platform setting defaults to 25%.

Additional revenue. FocusDojo Pro at €4.99/month or €39/year, with future potential for school partnerships and premium learning programmes.

Why it can win

A learning system, not only a marketplace. The compounding asset is the connected record of assessment, lesson activity, tutor feedback, homework, practice, and progress.

Human expertise stays central. AI supports question generation and structured follow-up, while tutors remain the trusted relationship and learning authority.

Operational foundations already exist. The product includes multi-role dashboards, booking, payments and payouts, class spaces, messaging, reviews, tutor onboarding, safeguarding workflows, and administrative controls.

Near-term validation focus

1. Convert free assessments into first paid lessons. 2. Increase repeat bookings and mission completion between lessons. 3. Prove parent-reported confidence and tutor retention. 4. Pilot a university or regional partnership channel.
